

Colours

The colour scheme used in Winter has undergone some revision. Previously, there were 5 branding colours for Winter, however, we have dropped one to avoid clashing blue shades, and introduced a neutral colour for text content or any elements that need to be unbranded.

To assist with Tailwind development, the remaining colours have been calculated to match Tailwind's colour palette paradigm.

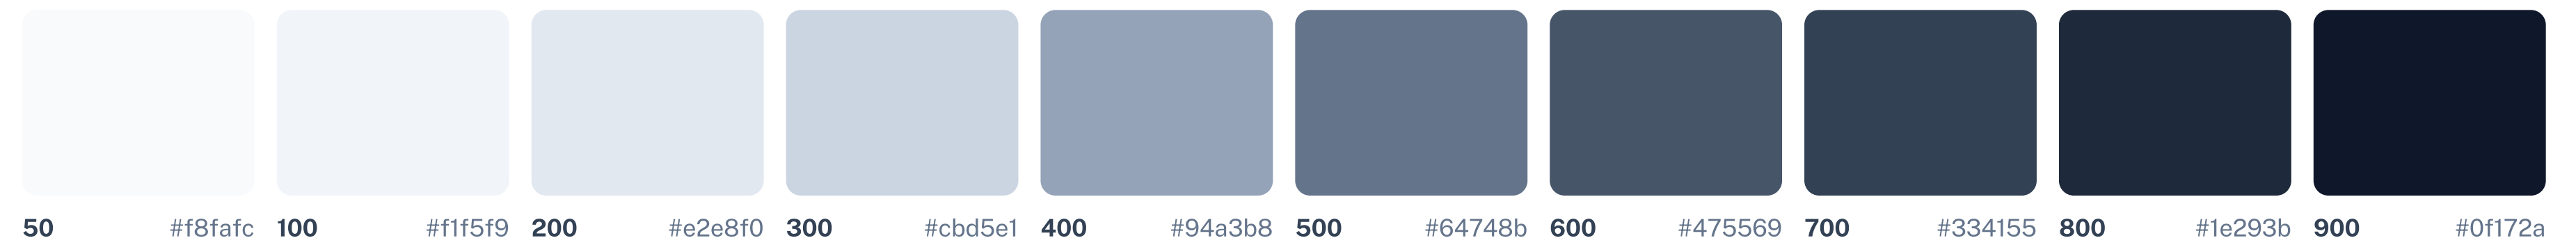

Primary Colour - Indigo Dye - Used for layout

Accent Colour - Pacific Blue - Used for interactive elements, highlighting and informational boxes

Neutral Colour - Slate - Used for text and unbranded elements

Positive Colour - Mantis - Used for positive or progressive elements and messaging

Negative Colour - Flame - Used for negative or halting elements and messaging
